Testing Report

1 Testing Objective

To verify that SafeAlert meets all functional and non-functional requirements and works reliably under expected usage conditions.

2 Testing Types

- Unit Testing
- Integration Testing
- System Testing
- User Acceptance Testing (UAT)

3 Test Environment

- OS: Windows/Linux
- Python Version: 3.8+
- Browser: Chrome, Firefox
- Database: SQLite

4 Test Cases Summary

Module	Test Cases	Status
User Registration	Valid / Invalid inputs	Pass
Login	Correct / Incorrect credentials	Pass
OTP Password Reset	OTP generation & expiry	Pass
Alert Viewing	Location-based alerts	Pass
Alert Filtering	Severity & status	Pass
Admin Registration	Referral code validation	Pass
Alert Creation	All field validations	Pass
Alert Verification	Status change	Pass

Alert Dispatch	Bulk email sending	Pass
Database Operations	CRUD operations	Pass

Total Test Cases Executed: 65
Total Passed: 65
Total Failed: 0

5 Defects Found

- No critical defects found
- Minor UI alignment issues resolved during testing

6 Conclusion

The SafeAlert system successfully passed all planned test cases and is considered stable and ready for deployment.
